# Case Study

# What is CannaPoS?

CannaPOS is point of selling software product that can be sold through a value added channel to the legal cannabis industry. Cannabis is having value per grams so inventory management and home delivery is measure aspect. Cannapos is Desktop application where we integrated mobile application for home delivery functionality.

# Tech Stack & Category

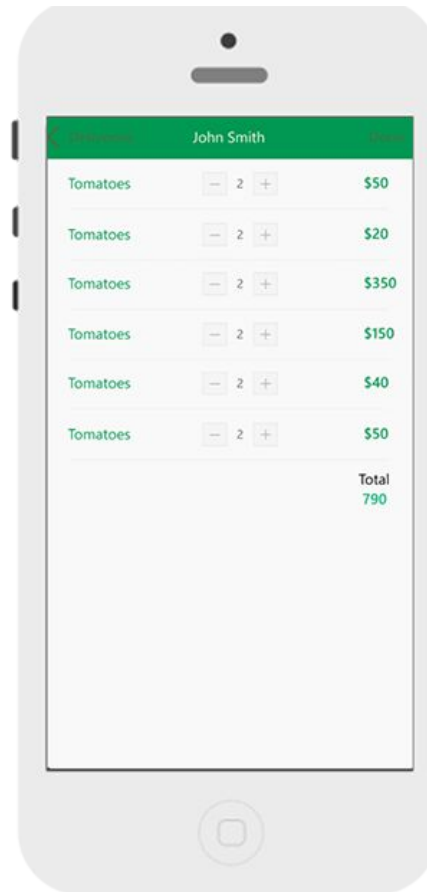

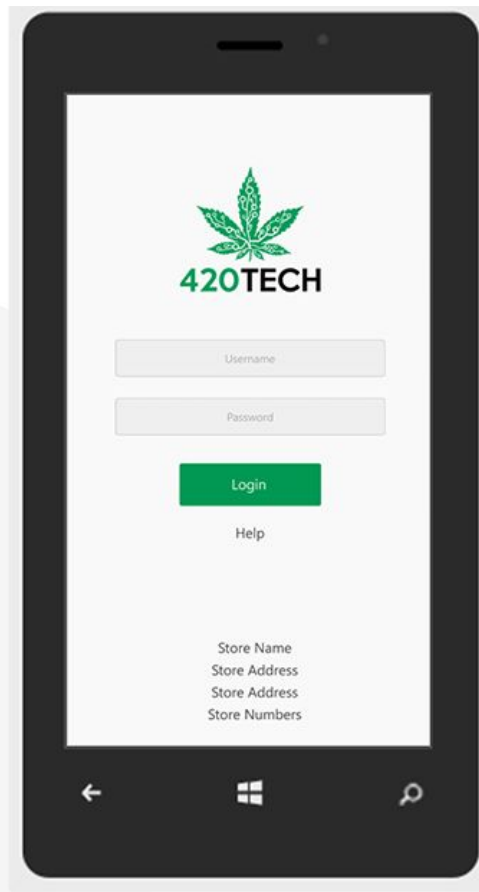

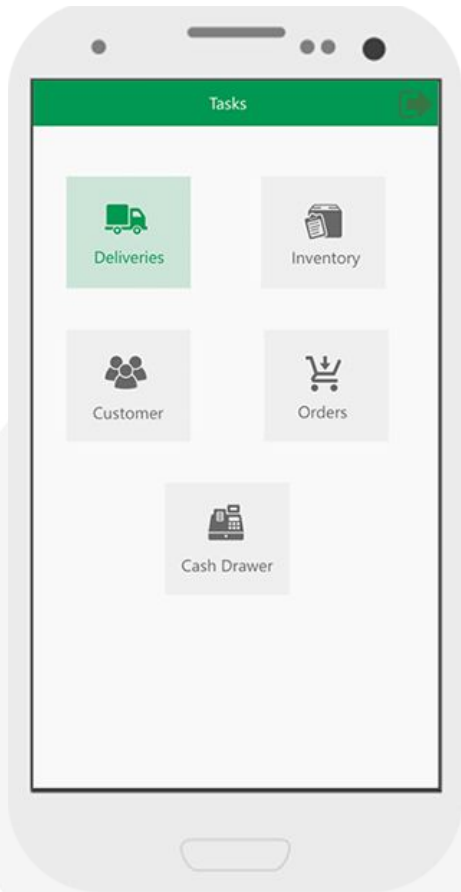

## Technologies

1. C#
2. WPF.

4. Asp.Net Web API

## Category

POS & Retail Application

# Key Features

- Multi-store Centralized Management
- Merchandising and Product Maintenance
- Home Delivery module is integrated in CannaPOS to manage details of driver, vehicle and route etc.
- Campaigning is handled by sending sms to the customers.
- Discount offers are shown by having promotional offers, credit points, gift cards etc.
- Pricing - Trade agreements, Sale and discount pricing, Quantity discounts  
Promotional pricing
- Customer, Employee, Vendor and Inventory management
- Financial - View/create POS statement, Credit memos, Accounts receivable/export

# How it Works?

Admin can register users in CannaPOS application by providing valid credentials to them, after registration user can able to manage all operations – Create order, assigning route and vehicle to driver, provides vehicle details to driver, will generate invoices and also user can set discount price and promotional offers from the system. Once the order is dispatched user can able to track location of driver, which leads to successful delivery of cannabis via CannaPOS.
