Case Study

What is Blaze Distribution?

This application is designed for cannabis distribution, Blaze distribution makes it easy to manage invoices, purchase order and expenses.

Tech Stack & Category

Technologies

1. C#
2. ASP. NET
3. REST API 2
4. JQuery
5. JavaScript
6. Bootstrap
7. CSS

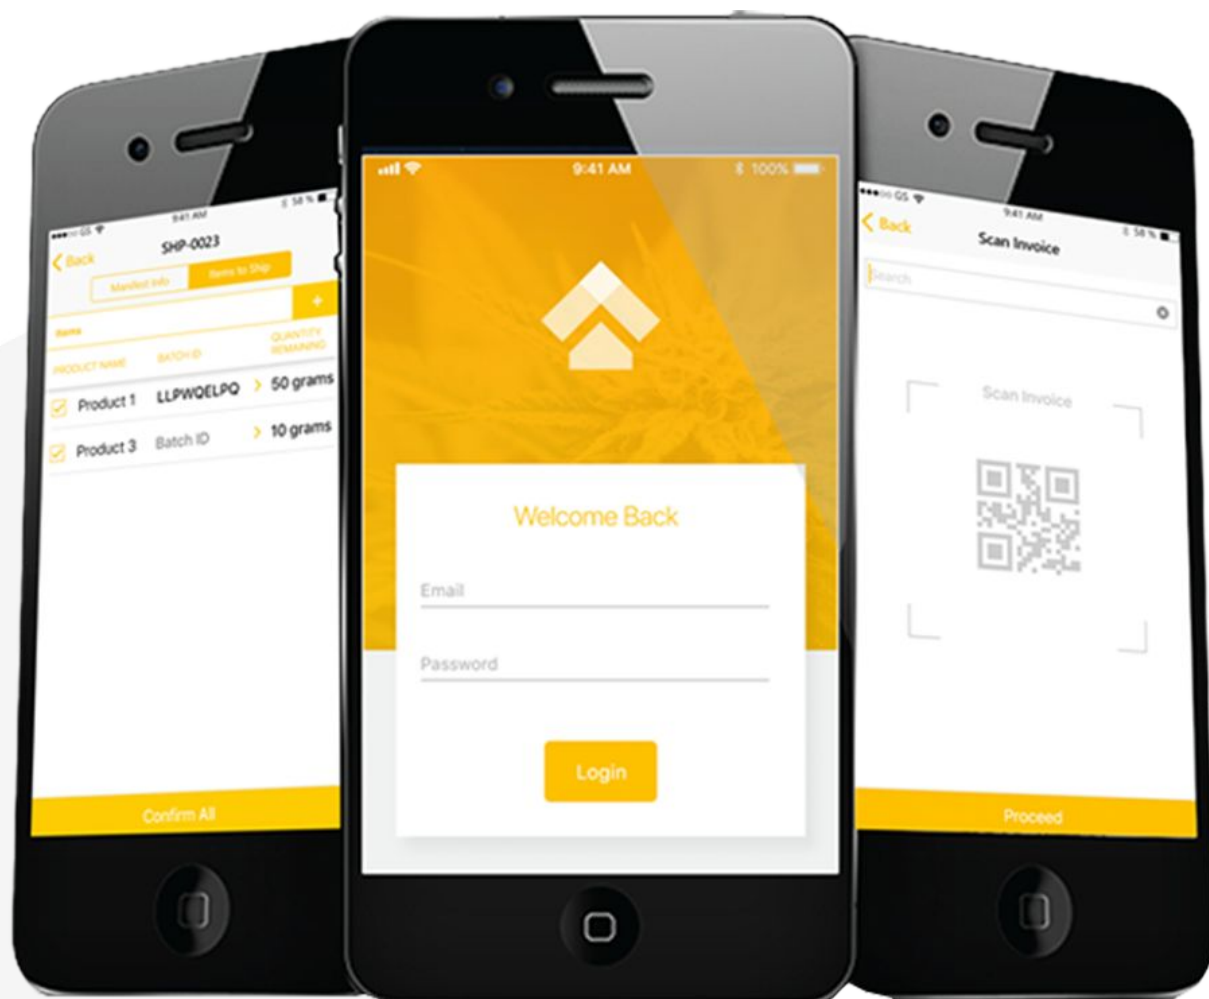

Category

Retail Distributor

URL

<https://blaze.me>

Key Features

- Invoice management, payment and shipping manifest documentation
- Easily manage inventory across multiple Warehouses
- Create and send an invoice in under a minute and tracks payments against the invoices
- Purchase order management

How it Works?

Distribution application will allow operator to keep track of Pending and completed invoices.

Operator can process the invoice by adding Payment info or shipping manifest to invoice. In case of shipping manifest the operator has to select list of products which are to be shipped in the manifest application and it take a signature of the operator to confirm shipment.

Using Distribution app, operator can track status of available inventory. User have ability to transfer inventory from one shop to another Shop, this helps operator to do management of inventory within shops.

Thank You!
