# Case Study

# What is InsiderLog?

InsiderLog application allows user to create and maintain an updated Digital insider list online which helps in saving considerable time with high security.

# Tech Stack & Category

## Technologies

1. Java 8
2. Python 2.7
3. Maven 3.5.3
4. Cassandra 3.11.2
5. Spring Boot
6. AngularJS 1.x
7. Hibernate

## Category

Digital Document  
Management

**InsiderLog**  
A EUROPEX COMPANY

## InsiderLog allows you to automate manage

It saves time and ensures compliance with the EU Market Abuse

**Automatic notification by email**

You just enter the email address, whereby an automatic notification is sent that informs each insider of its obligations under MAR and requests a confirmation.

**Insiders enter all info themselves**

Tired of all emails with information that you have to enter manually into the insider list? Let the insiders fill out the details themselves - in a form with required input fields so nothing is missed.

**Delaying disclosure**

To delay the disclosure of insider information a number of criteria must be met under MAR, and this assessment needs to be documented. InsiderLog guides you through the assessment for every new insider list and records it, in case the financial supervisory authorities would have any questions.

**Password-protected insider list**

The insider list must be kept electronically and be available only for authorized persons. InsiderLog has a two-factor authentication process - to sign in the user will need a password as well as a one-time verification code received via SMS.

**Track changes in the insider list**

According to MAR you must be able to track changes in the insider list, similar to an accounting software. It should not be possible to make changes without them being recorded. This is technically difficult to achieve with softwares such as Excel, but InsiderLog handles it automatically so you can be confident that you meet even the toughest requirements.

**Save confirmations separately**

Confirmations from insiders cannot be kept in a mailbox, but must be more permanently and separately saved. InsiderLog does the job for you and automatically saves the confirmations together with the insider list.

**Time stamps for all updates**

MAR requires that you register the exact time of creating the insider list, as well as when a new insider is added or any update is made. InsiderLog records everything automatically with exact time stamps.

**Notify the authorities**

When the insider information is disclosed you need to notify your local financial authorities. This notification shall include when the insider list was created and who made the decision to create it etc. This information is automatically collected and sent to your local financial authority, so you don't need

# Key Features

- User will get automatic notification by Email
- Insider enters all correct information by themselves
- It guides user through the assessment for every new insider list and records everything with exact timestamps
- Password protected insider list : InsiderLog has two-factor authentication process

# How it Works?

InsiderLog sets high requirements for how you manage and update your insider list. The requirements are both time-consuming and some are technically difficult to comply with by manual administrations.

For example, can you track changes made in your insider list? Probably not, at least not if you are using an ordinary Excel spreadsheet. Learn more about what it takes to be compliant. You keep full control of all tasks in your logbooks, as nothing is stored with us. The system is decentralized and every customer clicks it's own clouds.

**Thank You!**
