6. bootstrap
7. CSS

Category

Employee Tracking

Key Features

- GPS tracking of employee
- Offline capability of the application
- Time Tracking between the Start and Stop Events
- Configurable Endpoints and sync period in runtime
- Logs of the Event which have performed in chronological order
- Automatic and manual sync of Data
- Multiple Language Support

How it Works?

Employee will get his login and password from his employer, who has subscribe for this service.

Employee will log his activity such as Day, Travel and Work Start End.

App will track time and location of each such a event. It will be synchronize with cloud when device is online. It will display current event and notification on top area of the screen. This application have capability to execute in offline mode, whenever internet is available we will sync data with cloud server. User can select the task/ticket assigned to them while starting the work, so user's work will be attached with particular Task.

Thank You!
